

INSTALLING SQL SERVER AND CREATING AN EXAMPLE DATABASE.

PART 1: INSTALLING SQL SERVER ON YOUR COMPUTER

GET FREE SQL SERVER EDITION LOCALLY (1/4)

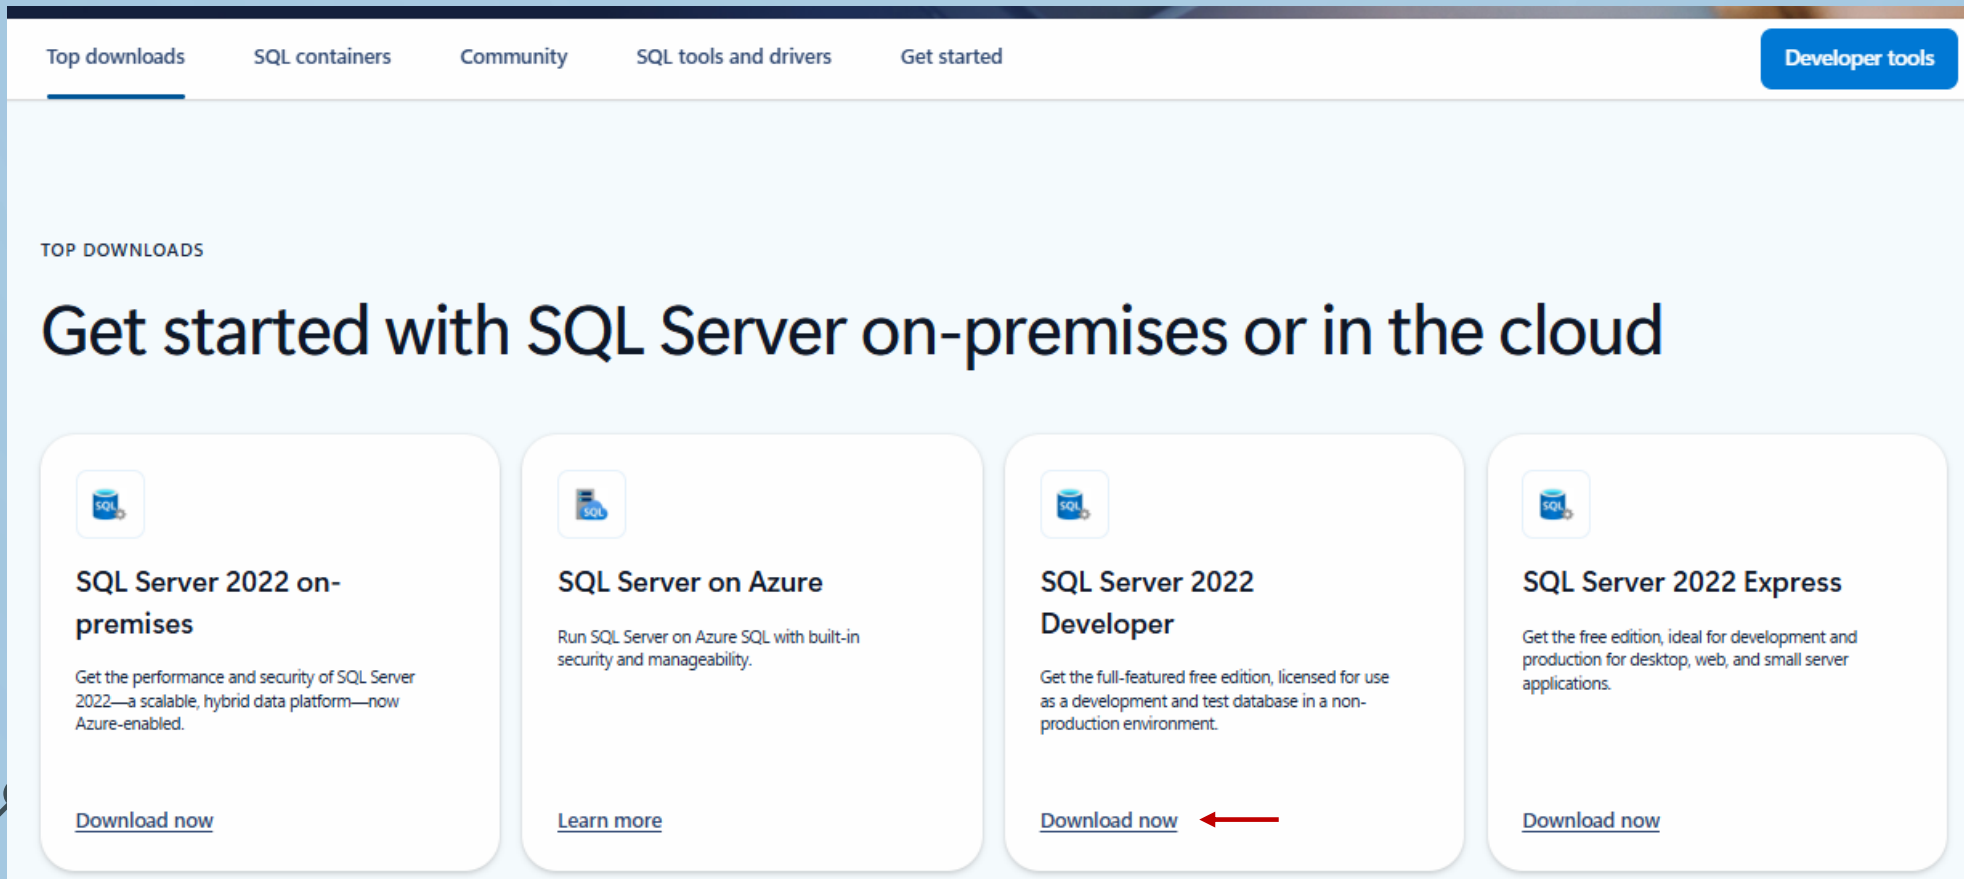

Step 1: Get SQL Server Developer Edition

Full-featured version, free for development/training.

Ideal if you want all features but not for production.

Link: <https://www.microsoft.com/en-us/sql-server/sql-server-downloads>

Choose the SQL Server 2022 Developer and then click “Download now”

The screenshot shows the Microsoft SQL Server Downloads page. The navigation bar includes links for 'Top downloads', 'SQL containers', 'Community', 'SQL tools and drivers', and 'Get started', along with a 'Developer tools' button. The main heading is 'Get started with SQL Server on-premises or in the cloud'. Below this, there are four cards representing different SQL Server editions: 'SQL Server 2022 on-premises', 'SQL Server on Azure', 'SQL Server 2022 Developer', and 'SQL Server 2022 Express'. The 'SQL Server 2022 Developer' card is highlighted with a red arrow pointing to its 'Download now' link.

TOP DOWNLOADS

Get started with SQL Server on-premises or in the cloud

SQL Server 2022 on-premises

Get the performance and security of SQL Server 2022—a scalable, hybrid data platform—now Azure-enabled.

[Download now](#)

SQL Server on Azure

Run SQL Server on Azure SQL with built-in security and manageability.

[Learn more](#)

SQL Server 2022 Developer

Get the full-featured free edition, licensed for use as a development and test database in a non-production environment.

[Download now](#)

SQL Server 2022 Express

Get the free edition, ideal for development and production for desktop, web, and small server applications.

[Download now](#)

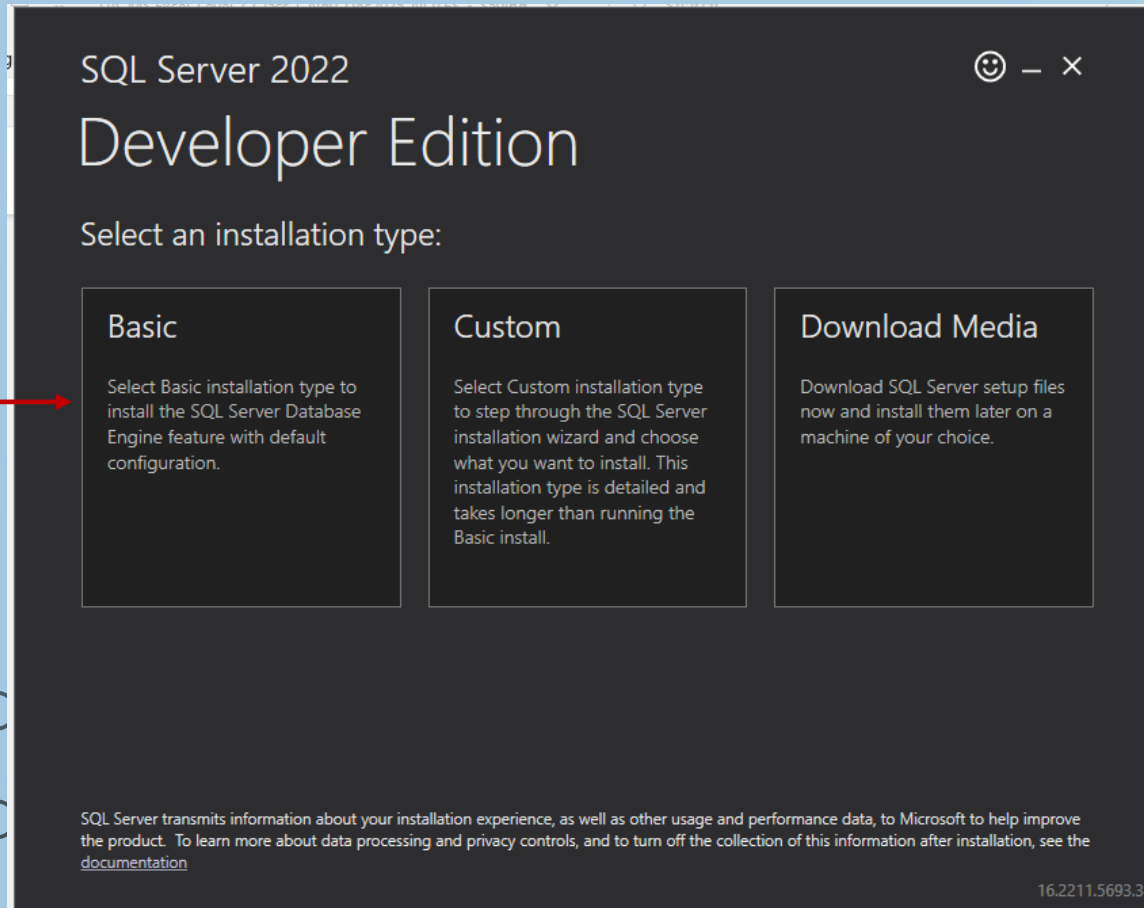

GET FREE SQL SERVER EDITION LOCALLY (2/4)

Step 2: Click on “Yes” when the exe file has been downloaded

Step 3: Choose “Basic” in the Developer Edition pop-up window

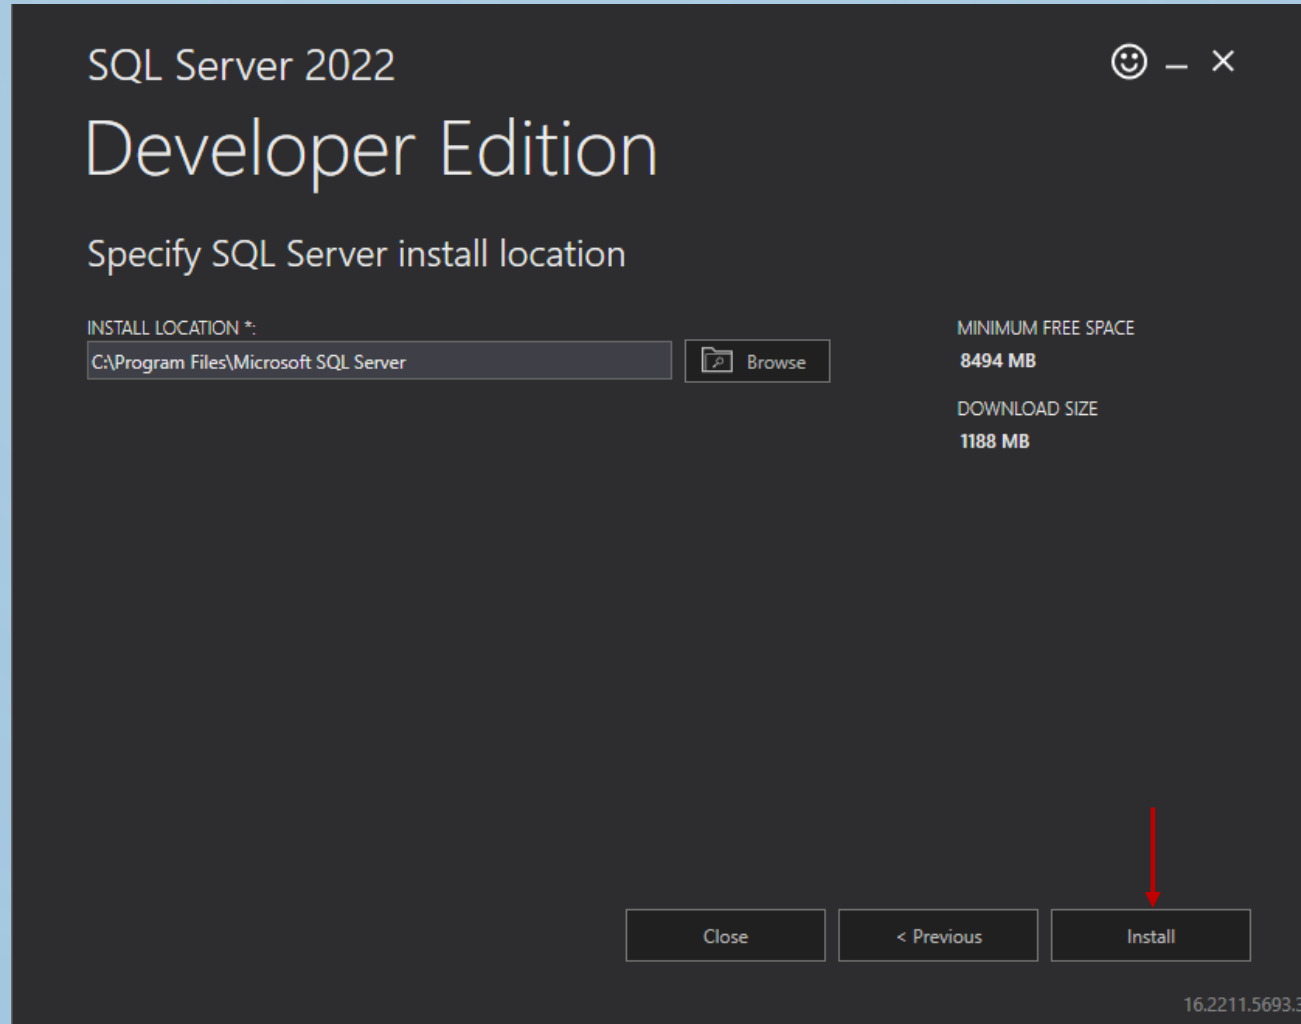

Step 4: Read the license terms. If you are comfortable with it, click on “Accept” button at the bottom

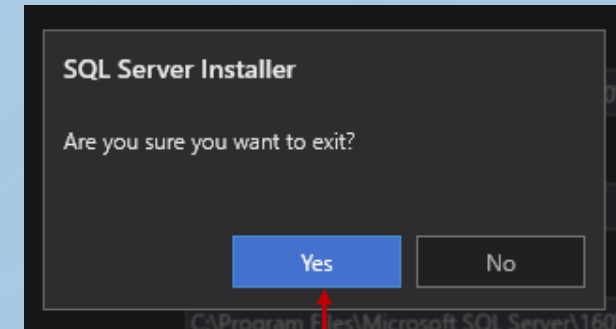

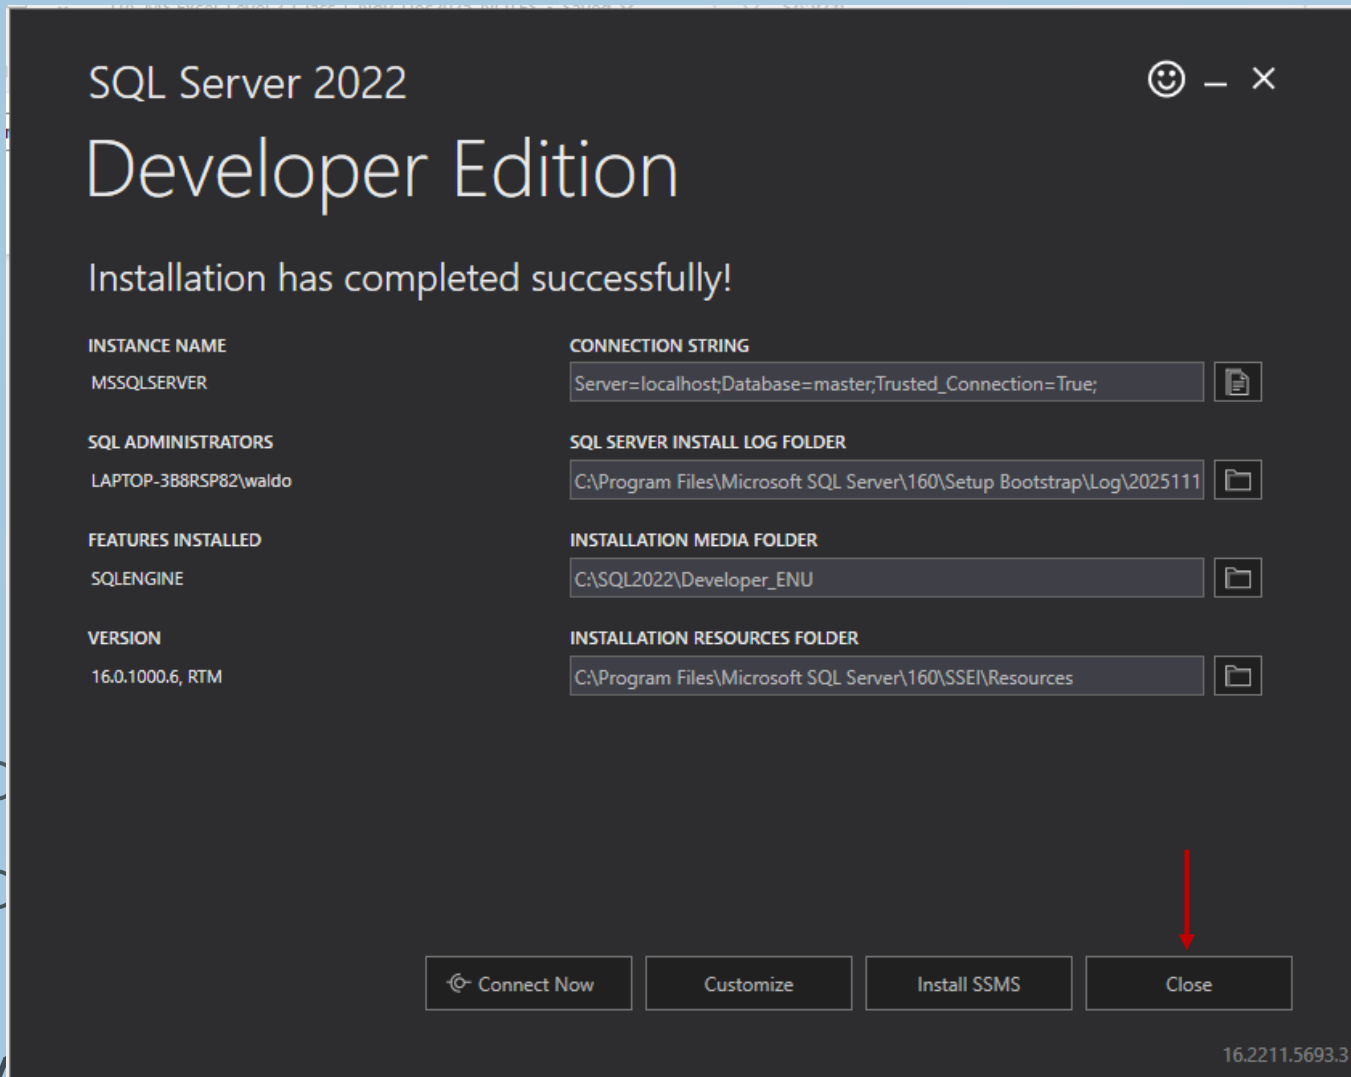

GET FREE SQL SERVER EDITION LOCALLY (3/4)

Step 5: Don't change the SQL Server install location. Just click on "Install" at the bottom and then wait for the download and installation to complete.

GET FREE SQL SERVER EDITION LOCALLY (4/4)

Step 6: Once you have confirmation that the installation has completed successfully click on “Close” and then “Yes” to confirm that you are exiting the installer.

WB
WALDO BEAUSÉJOUR
DATA ANALYST

PART 2: DOWNLOAD THE SQL SERVER MANAGEMENT STUDIO (SSMS)

WB
WALDO BEAUSÉJOUR
DATA ANALYST

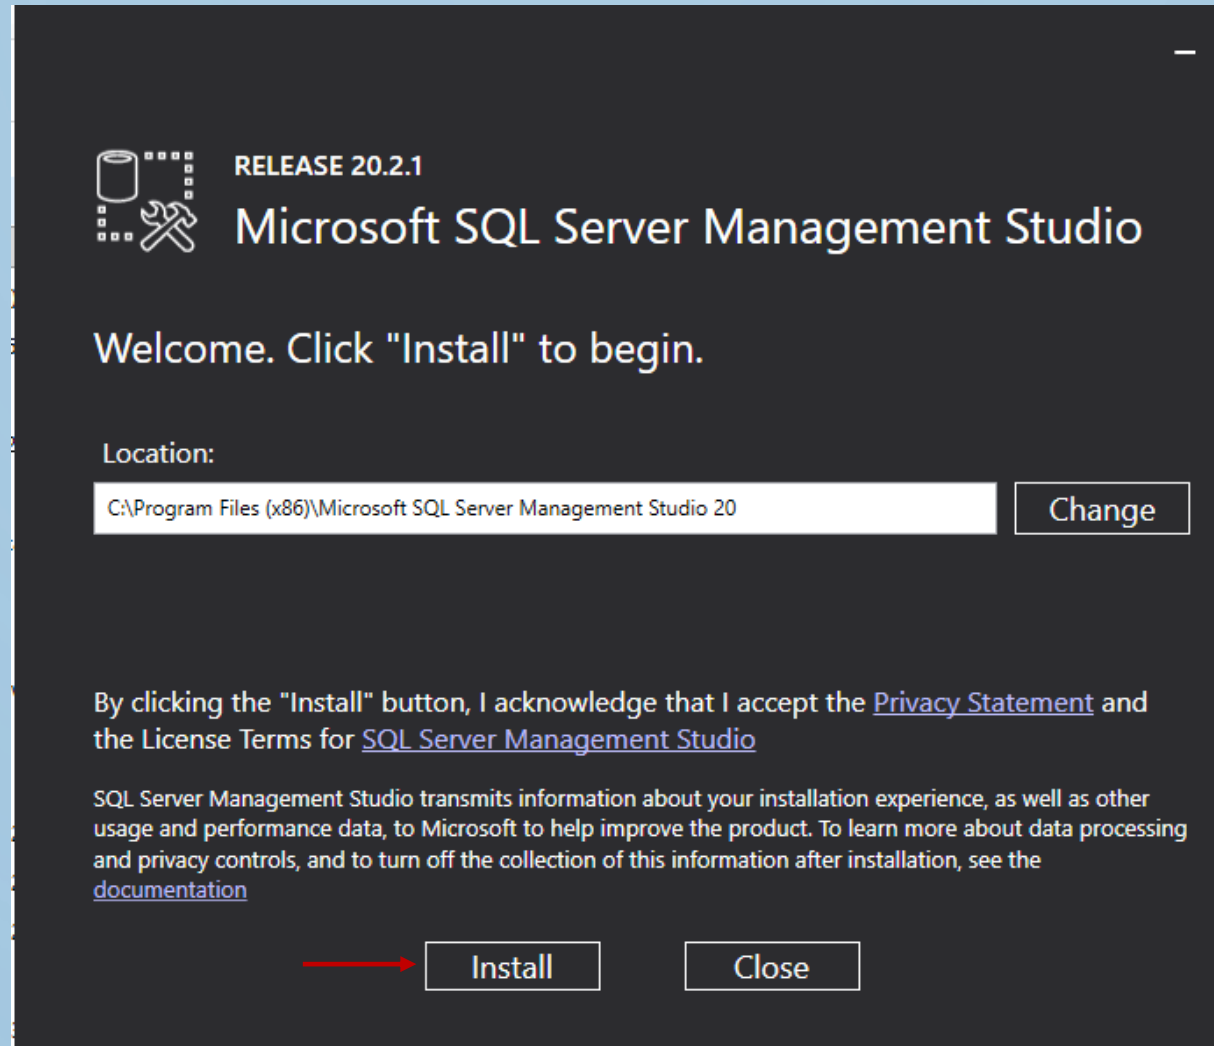

DOWNLOADING AND SAVING THE SSMS INSTALLATION FILE (.EXE) ON YOUR COMPUTER

1. Download the file **SSMS-Setup-ENU (1).exe** that accompanies the assignment (see Google Classroom). This is the installation file for SQL Server Management Studio (SSMS).
2. Once the download is complete, **double-click the file** to launch the installer, then proceed to the next slide for installation steps.

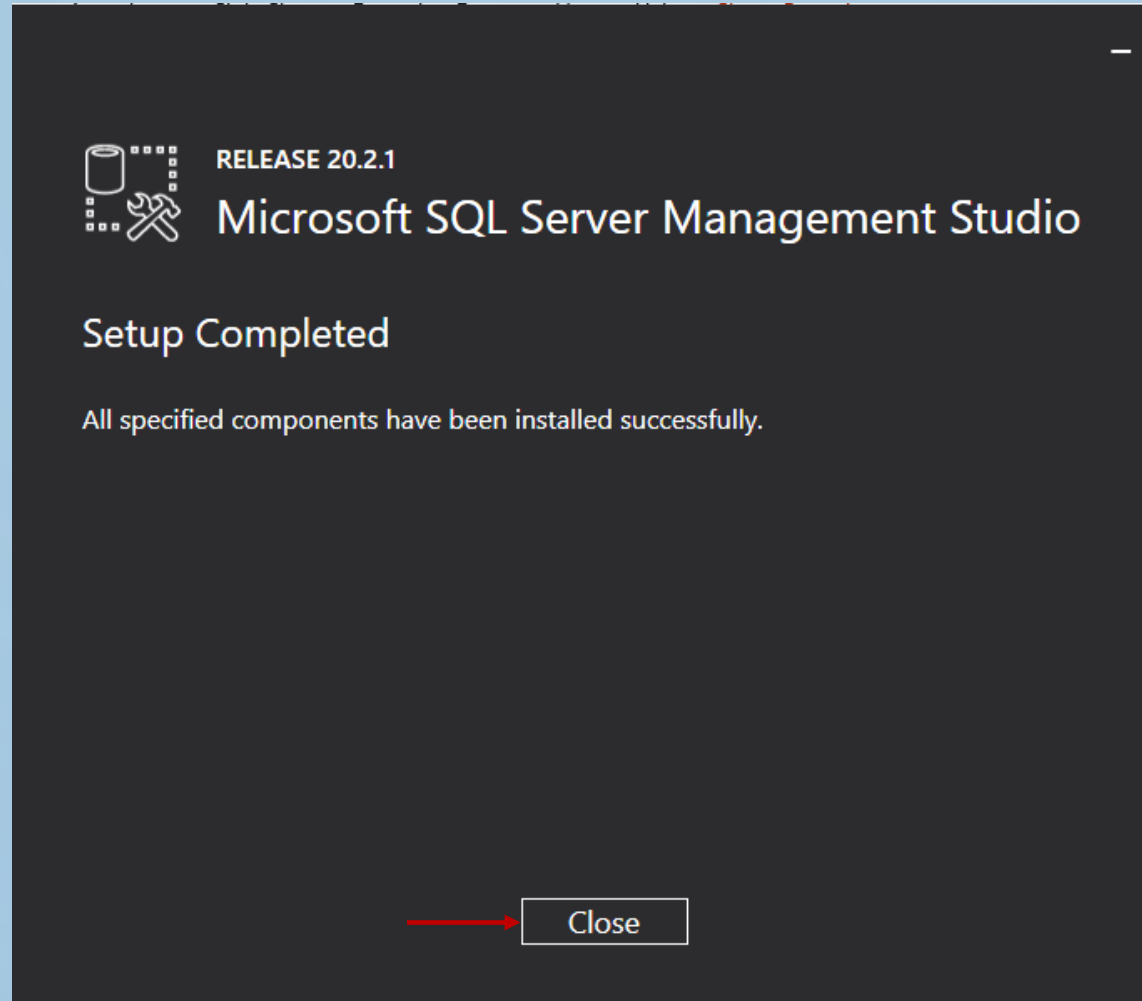

ACCESS THE .EXE FILE TO DOWNLOAD THE SSMS

The **SQL Server Management Studio (SSMS)** is the main tool to manage your SQL Server. To download it, click “Install” button and wait for the SSMS to download.

FINALIZE THE SSMS SETUP

Once the set up of the SSMS is complete, click “Close”

PART 3: CREATING A TEST DATABASE

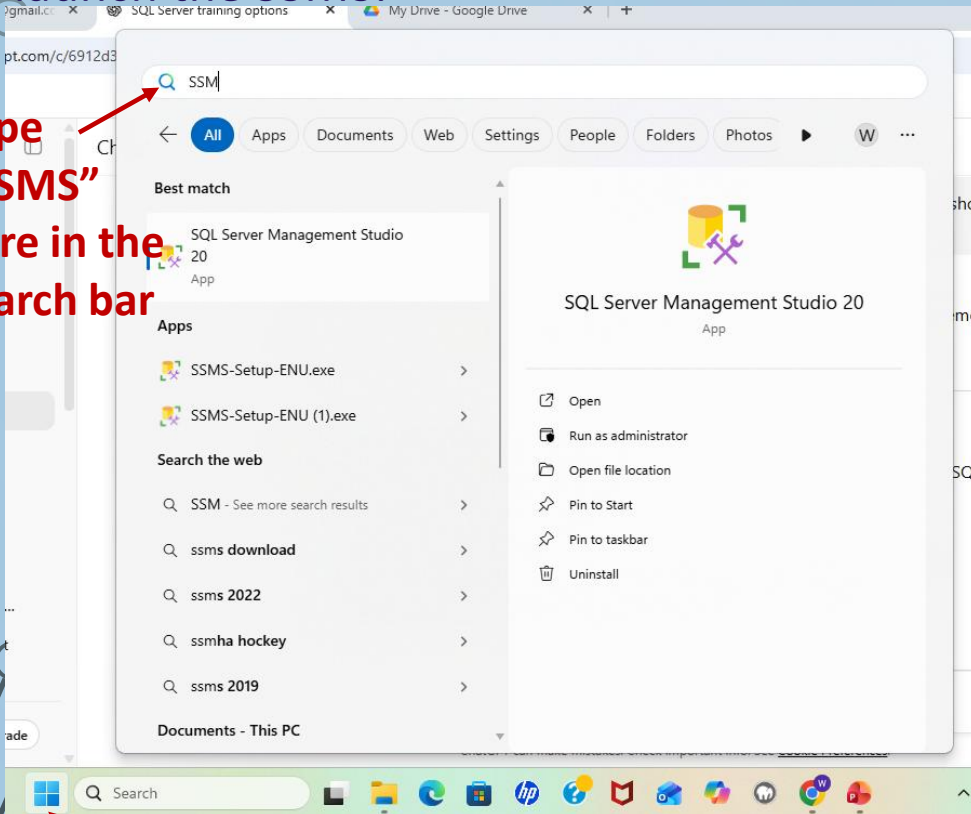

OPEN THE SQL SERVER MANAGEMENT STUDIO (SSMS) – 1/2

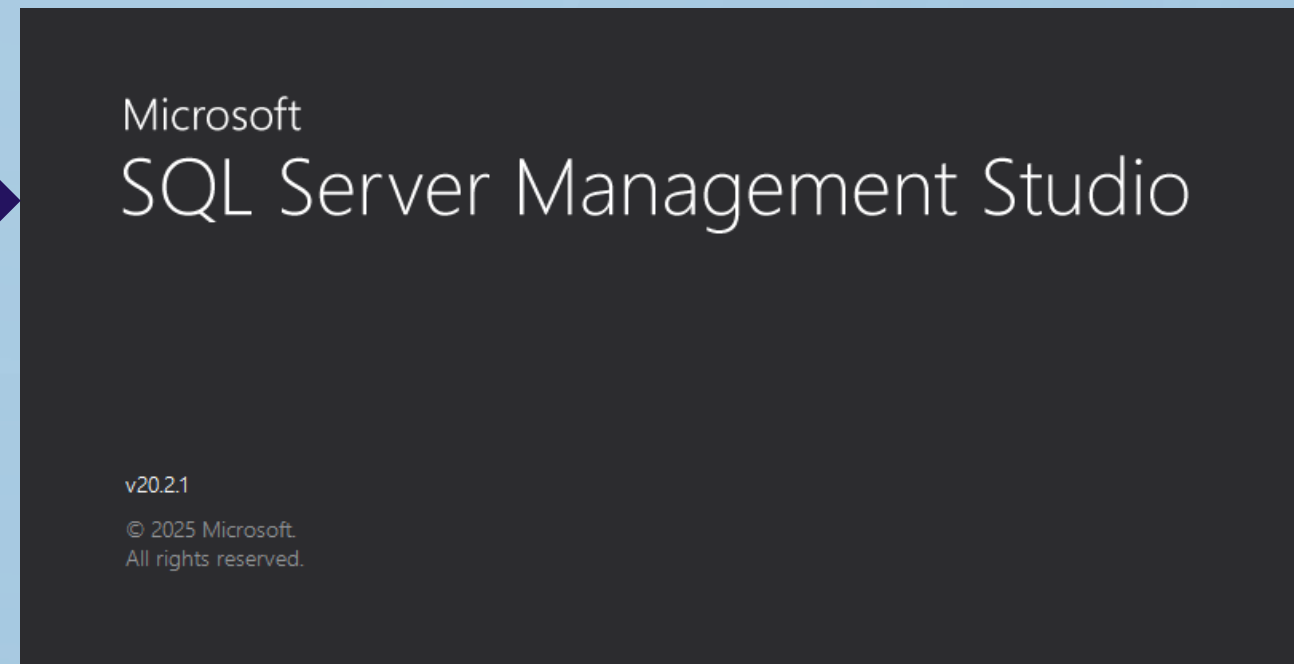

1. Click on the app launcher in the taskbar. In the search bar, type SSMS and then click open to launch the SSMS.

Type
"SSMS"
here in the
search bar

The app launcher

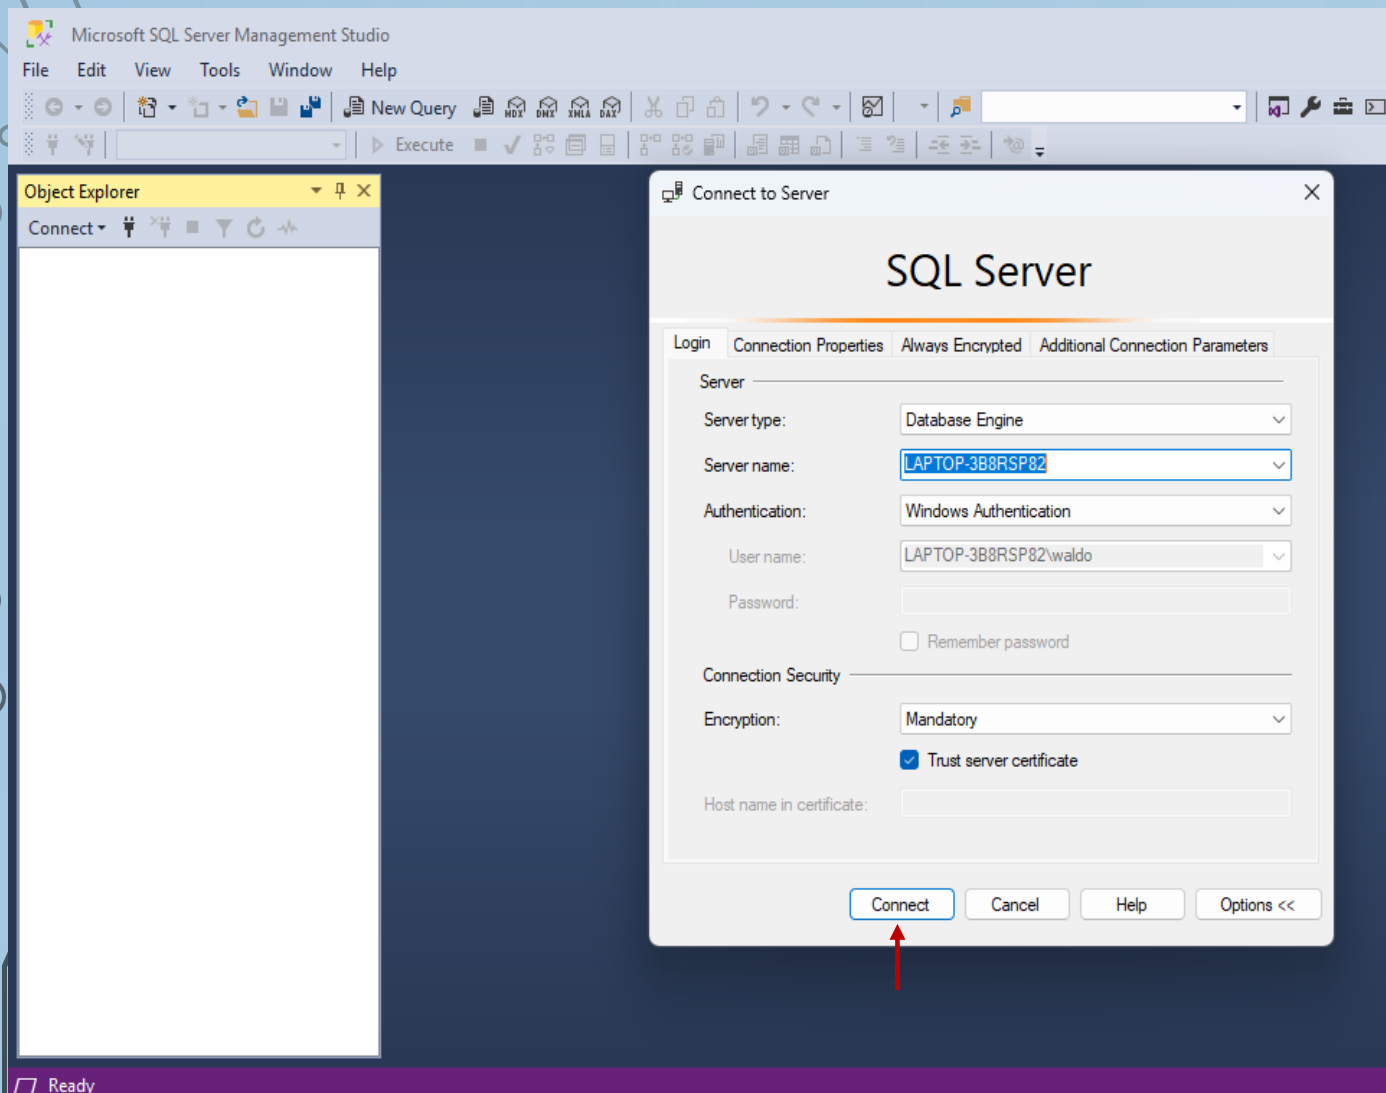

2. The window will show up, indicating that the SSMS is being launched.

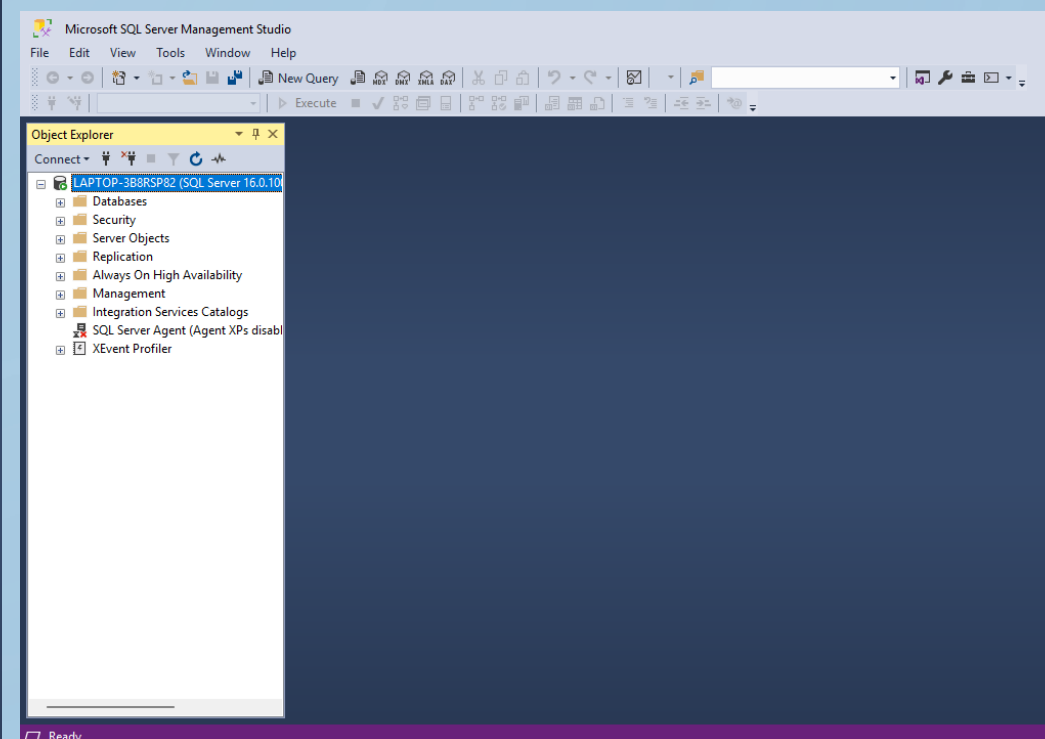

OPEN THE SQL SERVER MANAGEMENT STUDIO (SSMS) – 2/2

3. Click on “Connect” at the bottom of the dialog box

Then, this window will show up, indicating that you're right in SQL Server.

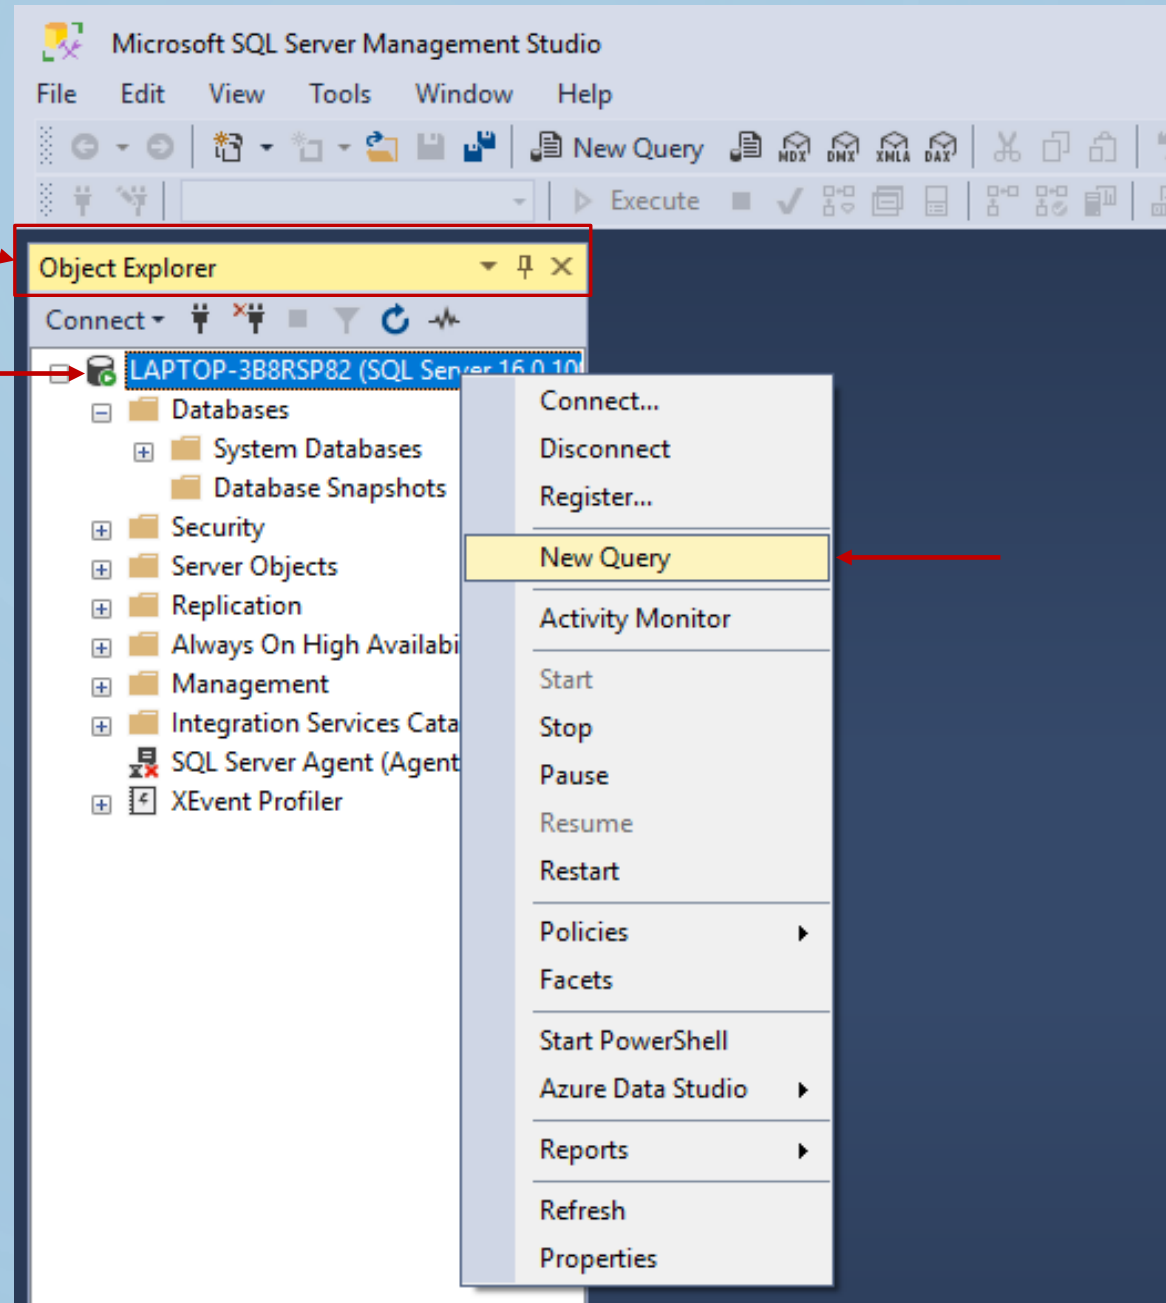

CREATING A SAMPLE DATABASE AND INSERT DATA

1. In SSMS, go to Object Explorer (left panel).

2. Right-click on your server, then choose New Query from the drop-down list.

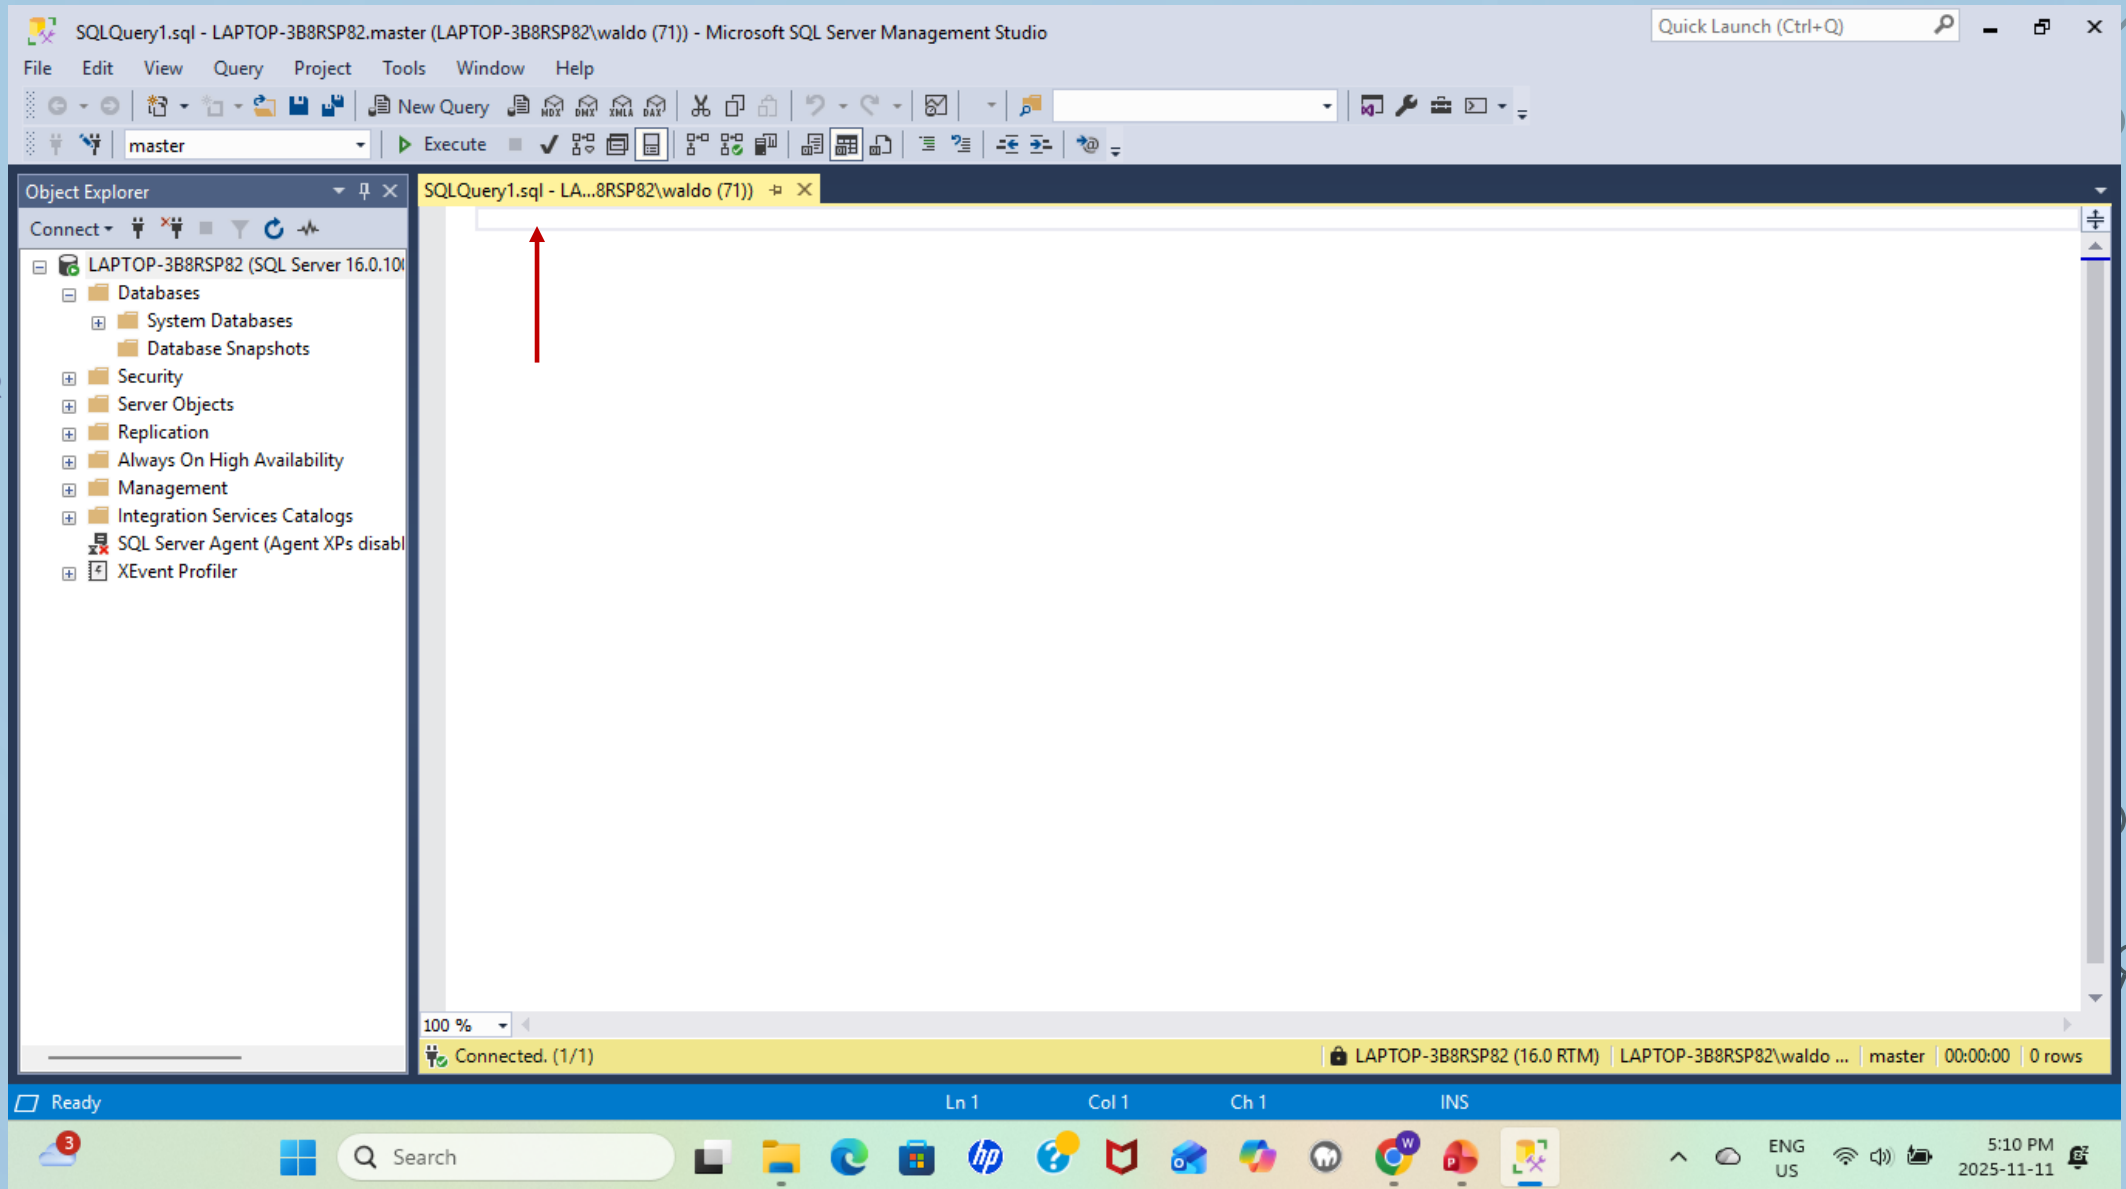

Outcome:

A blank editor window opens. This is where you paste the SQL script (see next slide).

BLANK EDITOR FOR SQL SCRIPT

Blank editor where you will paste the SQL script.

COPY SQL SCRIPT

Copy the following SQL script found in the Word document that comes with the assignment (**SQL Server Script for creation of training database.docx**) and paste it to the editor where you see the cursor is blanking, then click the “Execute button”. After pasting the script, click the “Execute button” to run it.

The screenshot shows the Microsoft SQL Server Management Studio interface. The title bar indicates the file is 'SQLQuery1.sql - LAPTOP-3B8RSP82.master (LAPTOP-3B8RSP82\waldo (71))* - Microsoft SQL Server Management Studio'. The menu bar includes File, Edit, View, Query, Project, Tools, Window, and Help. The toolbar contains various icons for file operations and database management. The 'master' database is selected in the dropdown menu. The 'Execute' button, represented by a green play icon, is highlighted with a red arrow. The Object Explorer on the left shows the server hierarchy for 'LAPTOP-3B8RSP82 (SQL Server 16.0.100.20)', including Databases, Security, Server Objects, Replication, Always On High Availability, Management, Integration Services Catalogs, SQL Server Agent, and XEvent Profiler. The main query editor displays the following SQL script:

```
CREATE USER training IDENTIFIED BY demo123;  
GRANT CONNECT, RESOURCE TO training;  
  
CONNECT training/demo123;  
  
CREATE TABLE employees (  
    emp_id NUMBER PRIMARY KEY,  
    first_name VARCHAR2(50),  
    last_name VARCHAR2(50),  
    department VARCHAR2(50),  
    salary NUMBER(10,2)  
);  
  
INSERT INTO employees VALUES (1, 'Alice', 'Johnson', 'HR', 60000);  
INSERT INTO employees VALUES (2, 'Bob', 'Smith', 'IT', 75000);  
COMMIT;
```

COPY SQL SCRIPT

If the database “Training DB” does not show up on left pane under database, right click on the database folder “Databases” on the left pane under the local server, then click on refresh

The screenshot shows the SQL Server Enterprise Manager interface. In the Object Explorer on the left, the 'Databases' folder under the 'localhost (SQL Server 16.0.1000.6 - LAP)' server is selected. A red arrow points to this folder. Below it, the 'TrainingDB' database is listed. The main pane displays a SQL script named 'SQLQuery2.sql' with the following content:

```
-- =====  
-- SAFE Demo SQL Server Database for Excel Training  
-- =====  
  
-- Drop database safely if it already exists  
IF DB_ID('TrainingDB') IS NOT NULL  
BEGIN  
    ALTER DATABASE TrainingDB SET SINGLE_USER WITH ROLLBACK IMMEDIATE;  
    DROP DATABASE TrainingDB;  
END  
GO  
  
-- Create database with new file paths  
CREATE DATABASE TrainingDB  
ON PRIMARY (  
    NAME = N'TrainingDB',  
    FILENAME = N'C:\Program Files\Microsoft SQL Server\MSSQL16\MSSQLSERVER\MSSQL\DATA\TrainingDB_New.mdf'
```

The Messages pane at the bottom shows the execution results:

```
(4 rows affected)  
  
(7 rows affected)  
  
(4 rows affected)  
  
Completion time: 2025-11-11T17:47:46.9539765-05:00
```

The status bar at the bottom indicates 'Query executed successfully.' and shows the connection details: 'localhost (16.0 RTM) | LAPTOP-3B8RSP82\waldo ... | TrainingDB | 00:00:00 | 0 r'.
